## TRS Quick Release Buckle

### TRS' Quick Release Buckle

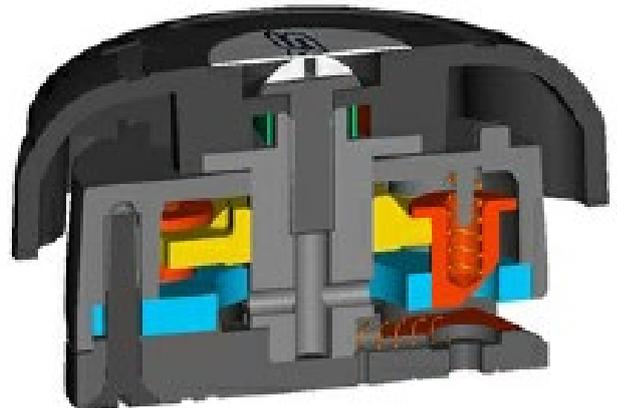

- ▶ FIA approved 8854:98 and 8853:2016
- ▶ Hardened heat-treated stainless-steel internals
- ▶ 50 hour corrosion test
- ▶ 140g weight
- ▶ Low profile lid, always resets to the ready to use position
- ▶ Ideal for race, rally, marine and military

TRS has a variety of Quick Release Buckle designs (QRB), which are suitable for motorsport, marine and military harnesses.

Homologated to FIA 8853/2016, 8854/98 and SFI 16.1 standards, TRS' QRB is the buckle of choice for motorsport teams and manufacturers because of its lightweight 140g construction. The cleverly designed low profile lid is easy to use and always resets to the ready to use position. This no fuss approach, makes the QRB perfect for endurance racing as the buckle is always in the ready to use position for the next driver getting into the car.

The QRB lid and body are manufactured from aerospace polycarbonate and the base machined from high grade anodised aluminium. Internally, all the metal parts are manufactured from heat treated high quality stainless material. The QRB passes the 50 hour corrosion test.

Please contact TRS if you have a marine or military harness project and require a harness with a stainless steel buckle. This is the buckle to use.
